Our Dynamometer opens up a world of opportunities to anyone interested in:

- adjusting and tuning an engine to its unique potential
- modifying or upgrading the engine with proof of "before and after" performance
- measuring torque and horsepower accurately
- identifying areas of power loss in an engine
- testing different engine components
- testing fuels, lubricants, or other power-related items
- charting and graphing engine horsepower and performance

Data for each dyno pull is captured by a sophisticated computer and software. Customers receive detailed comparison curves "before and after" power train modifications. Chastain Race Engines will store your data for future comparisons.
